MEMORANTIM FOR: 'Chief,

Subject:

Observation of Flying Object Nee

During my trip inside the pursons who observed an unusual flying object area. Following one the details of my own observation of , this object, to the best of my recollections

Our trip free the train was planted according to timetables as well-ble in the train was rejected to leave the devine devilight. Apparently the train officials responsible in the train schedules, and car schedule was eltered in the left about 1000 hours on Der accuminations vere in a "soft" alcaping com Thesery, the modifications of the interestional type, consisting of six the purson comparisons. The car was occupied as follows:

Compartment 1 .- Porter

2 - Probably emp

Appel and a committee on American civilian who traveling on private business.

general who wore a hat with a A vous givilien, about 26 years old, propably

The car was arranged with compartments all on one side, the left side as one faced forward, with an aicle on the right side. There were windows in the compartments and on the outside of the misle, but not in the aisle wall of the conservates. However, during the time of the observation, the come to my comparisant was open, so that novement of pursons in the siele would have been observable. My resollection in that the vinder of my conservation, been open a little voy from the top. Frior to the time of cheervation, where all together in Compartment 4.

- 2. From the train traveled slowly along the product of in a generally southerly direction. Before the train turned at the following went to his own compartment to rect and burned off the light in Compartment 3. At the train turned westward.
- About ten migutes after we had rassed About ten minutes after we had passed the said, "I just new a flying Compartment &, and, with great excitentiat, said, "I just new a flying sameer!" The time was then about 1/10 hours. When asked where he had

Approved for Release

to the links of the constraint, saying, Seen it in the lights." elso west to the window, and I looked over their shoulders. sald, "I just sow it coming up." When the lights were dil, I saw through the window, to the south of the train, an object resulting a searchlight at the end of the horizon, perhaps a little above the horizon. It did not three a bona but instead gloval with a rotation light, according like the glowing of on electric bet plate. It leaved like a circular light standing on cage, Secing the train, and perhaps tilted alignly desenand. I had the inpression that the searchlight was at a distance of perhaps four to six niles. The land was flat and without buildings, installations, or special vegetation. At the time of observation, trilight had fallen and the first for sters were out but it was atill light enough to see for sees distance. The sky was clear, with no clouds.

- 4. At this point I said, "I don't see it." ald. "Zare, it's coming again"; and the others said, "Yes, it's coming up. It's whirling. I then acticed an object slightly to the right of the searchlight. It bad two shining eyes and seried to be rising vertically. It then seemed to change course and to approach the train on more of a hardwatel course but still escending slightly (traveling northward). I ma not certain vhoties the body of the object changed position, but the eyes, which seemed to be fixed on the side of the object facing the train during the excent, continued to face toward te. The eye on the left was brighter than the other but both gave a white light, glowing like a firefly rather than contling a beau. On the horizontal course, the object gave the impression of gliding. No noise was heard and no exhaust glos or trail was seen by no. When the object appeared to be about to pass over the train, I ran to the other side of the train in order to look out the winder on the nisle side, but I say nothing. The observation lasted about six or neven seconds, maybe less. The porter was standing in the corner of the aisle. forward, maar Compartment 6, but did not seen to be looking out the window at the time.
- 5. After the object had passed, we turned on the lights in the compartment, and the light series. I wanted you boys to see it so that I would have witnesses. Everyone in the compartment was convinced that we had seen something real and unusual. I naked if it could have been some kind of airplane and the others replied, "No, there was no resemblance."
- 6. A few mightes later, that I, as interpreter, wak the parter the name of the last station which we had made. I was reluctant to do so for fear of archising the parter's suspicion. However, the parter's suspicion. However, the parter's suspicion about five to seven minutes after the observation, I approached the parter in the close and in a reunichout way approached the question of the names of the last and next stations, whether they were large, and how long we

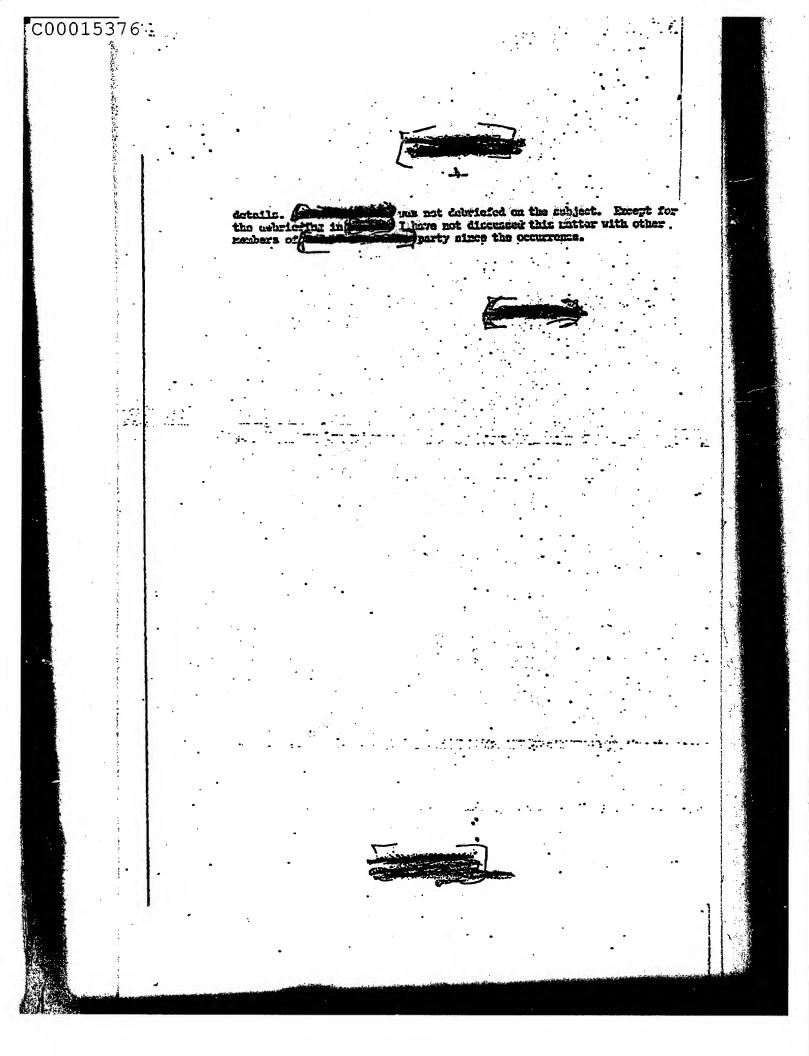

would stop at the next station, communize that we should like to obtain some water or ten. The parter ensured in only governal terms, not making the stations, but saying, "The next station will be a longer step and you will be able to get off to buy scrething." I returned to the compertment and told compensation that the parter seemed a little reluctant to give eny descript. A few minutes later the parter case into Compartment 4 and pulled from the window shade, saying (The Compartment 4 and pulled from the window shade, saying (The City better this way). He clea pulled the shades on the sinte Windows, but I do not recall his enturing the compartment to pull the shades. After the stop at the rest station, he gave me the name of the stations The porter my have show some alight excitorent when he pulled the sinder, but I do not billieve that his excitement was connected with our observation. I believe that the cause my have been his failure to follow the standard rate on Sail trains to pull the stacks as occars it because dark. He was late in doing this, and no doubt we were passing through some restricted area where such instructions must be observed strictly. I do not believe that either of the other two passengers in the car tipped off the porter that something important had happened. Zefore dark, the passengers in Compartment in Compartment 5 had asked the porter to prepare his bed because he had to get up at 0200 hours to get off the train. As far as I know, he went to bed quite some time before the occurrence. The civilian from Compartment 6 was seen in the ninle scretime after the occurrence but not at the time of the occurrence

- 7. I camiet describe the shape of the object which we observed, imaginch as I observed no silkoustre. I had the impression of a about object, probably shorter than an airplane, but in no way did I obtain on impression of the silliprette of an airplane. Perhaps the object could have had short wings. I am not certain whether it was or was not disc-shaped or circular. It appeared to us that the object at first was further from the train than the secrebicht. At all times, the searchlight appeared to be larger than the object and stationary. I cannot estimate the altitude reached by the object, but it was very high. I cannot estimate the speed at which the object traveled. It did not seen to be traveling very fast. On its horizontal course, it seemed to be gliding smoothly, and it seemed to be noving were slowly as it approached the train than when first observed. It definitely did not which by at an unusual speed. I did not hear any noise which night have been associated with the object, and I believe that the some of an airplans engine "Buld have been heard over the train noises. I best chearved the eyes of the object when the object approached the train. They were distinctly two in number, set apart at a flued distance, but I commit estimate how for epart they were. I observed no other, small lights on the object. I do not recall seeing any military traffic or installations of significance within half an hour on either side of the point of observati
- 8. Only the last debricing and I were debriefed in the principal speaker; I provided only a few supplement

: for

Interrogation officers

1. The train was about one hour and ten minutes out of train had traveled for about 10 minutes after it turned east away from the time was about 7:10 PM.

- 2. The object was sighted out the left side of the train. The landscape was a bare plain to the horizon.
 - 3. The grain was moving at about 30 mph.
- h. The lights had been turned on in the train but it was not yet completely dark outside.
 - 5. The sky was clear.
 - 6- Comparison was resting it one comparison which was dark,
- 7. ment with Il
- - 9. The lights were entinguished and all looked out the window.
- 10. saw a search light which was described as a glow. There was no beam.
- like eyes, rise verticelly and them move rapidly over the train. He looked out the opposite side of the train but could see nothing.
- 12. The body of the object appeared only as a darkened object agains the sky. It may have been square or round, he was not sure.
- 13. The lights were not quite equally spaced on the span of the object, being sussiat closer together than the distance to the tips.
 - Ili. There appeared to be stub mings on the object.
 - 15. The object appeared to be about 1/3 the size of the searchlight.
 - 16. It was not possible to estimate the distance to the object.
 - 17. The total time of sighting was estimated to be about 5 seconds.
- 18. About 10 minutes after the sighting, the steward came in the compartment and pulled the shade down. When they protested he said it
